ARTS IN SCIENCE

# PROGRAM

- 08:45 – 09:20**      **Registration**
- 09:30 – 09:40**      **Opening - How to save our planet**  
*video by biologist & storyteller David Attenborough*
- 09:40 – 09:50**      **Welcome and introduction**  
*prof. dr. Cécile Boot, director APH*
- 09:50 – 10:35**      **Think big, act now**  
*ir. Babette Porcelijn*
- 10:45 – 11:10**      **Coffee & tea break**
- 11:15 – 11:45**      **Climate change: navigating between hope and fear**  
*dr. Niek Sperna Weiland & prof. dr. Wouter Hehenkamp*
- 11:50 – 12:20**      **From inequality to equity: Sustainable strategies to reduce inequalities**  
*dr. Lieke Boonen, deputy director Pharos*

**12:30 – 13:50**

**Walking lunch break**

- > Arts in Science (12:30-13:50)
- > Poster presentations (12:50-13:50)

**14:00 – 15:30**

**Parallel theme sessions**

*organized by APH research programs*

**15:30 – 15:50**

**Grab a healthy snack break**

**15:50 – 16:20**

**Plenary closing**

- > Recap of the day
- > Poster award & Booster Grant award ceremony

**16:20 – 16:30**

**Artistic closing**

**16:30 – 18:00**

**Drinks & appetizers**

# KEYNOTE SPEAKERS

## BABETTE PORCELIJN

THINK BIG, ACT NOW

### Biography

ir. Babette Porcelijn is a designer and a self-called 'professional problem solver'. As the author of the books *The hidden impact*, *EcoPositive in five steps* and *The happy 2050 scenario*, she is a popular speaker and regularly appears in the media. She is also founder and director of ANBI foundation *Think Big Act Now*. Babette studied Industrial Design at TU Delft (2001) where she gained knowledge of industrial processes and chain analysis. After working at different agencies for 10 years, Babette started her own design studio in 2011. In her latest book, Babette delves into the scientific literature in search of the system drivers that are pushing the world in an unsafe direction, and what we as society and as individuals can do about it. Everyone can develop battle power; contribute to a safe, happy world. This starts with understanding what is needed at the system level, and then you can use your talents and abilities to optimally contribute to that.

---

# NIEK SPERNA WEILAND & WOUTER HEHENKAMP

## CLIMATE CHANGE: NAVIGATING BETWEEN HOPE AND FEAR

### Biography Niek Sperna Weiland

Dr. Niek Sperna Weiland is a staff anesthesiologist, particularly focused on reducing the environmental impact of anesthetic practices, leading efforts to phase out the use of volatile (gaseous) anesthetics both in the Netherlands and internationally. His research interests lie at the intersection of healthcare and environmental sustainability. Beyond clinical practice, he founded and currently directs the Amsterdam UMC Centre for Sustainable Healthcare. Here, he is dedicated to bridging research and implementation to drive sustainable change within healthcare. His work involves supporting over 65 Green Teams, fostering a vibrant community of more than 4,000 engaged employees, and guiding a diverse team that includes PhD students, post-docs, and experts in Life Cycle Assessment (LCA) and Health Technology Assessment (HTA).

Additionally, He represents the Faculty of Medicine in 'UvA Seven', the University of Amsterdam's climate initiative, where he works on applying systems transformation to promote climate action and resilience. His research is deeply collaborative, and he actively partners with companies, governments, NGOs, and healthcare professionals in multidisciplinary initiatives aimed at achieving sustainability transitions in healthcare.

### Biography Wouter Hehenkamp

Prof. dr. Wouter Hehenkamp has been a gynecologist since 2011 and has been working ever since in Amsterdam UMC. In addition to his clinical and research expertise, Wouter has developed a keen interest in sustainability in healthcare, recognizing the inextricable link between sustainable practices and effective medical care. This focus led to his appointment as a professor of 'appropriate and sustainable healthcare' in 2024. Five of his PhD students are focusing completely on sustainability and are appointed through grants in sustainability research. Together with Prof.dr. Dionne Kringos (deputy head of dept public & occupational health) and Dr. Niek Sperna Weiland (see above) he works on incorporating sustainability in research within Amsterdam UMC. They have written a position paper 'Sustainability in research in Amsterdam UMC'. It will be published in the fall of 2025.

---

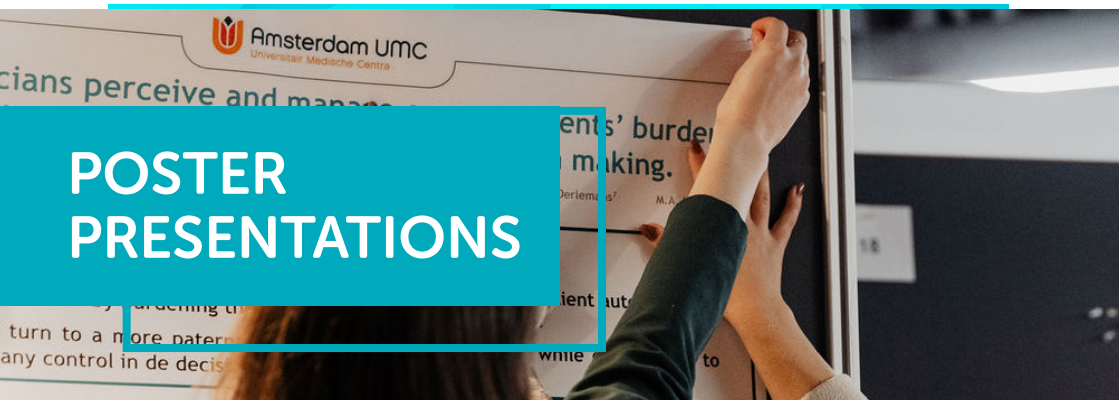

## LIEKE BOONEN

### FROM INEQUALITY TO EQUITY: SUSTAINABLE STRATEGIES TO REDUCE INEQUALITIES

#### Biography

Lieke Boonen is deputy director of Pharos, the Dutch centre of expertise on health inequalities. Pharos works to reduce health disparities by providing knowledge, advice, and practical tools for professionals, policymakers, and communities. Lieke is also affiliated with Erasmus School of Health Policy & Management (ESHPM). Her work focuses on improving access to health care and reducing health inequalities by bridging research, policy, and practice.

| 38 | Mana Nasori               | QoC  | Who takes the lead? Dispersed responsibility in interprofessional collaboration around challenging behaviour in rare genetic intellectual disability syndromes (RGIDS)             |
| 39 | Marente Mol               | QoC  | Barriers and facilitators to participation in public health research among underserved groups: a qualitative study                                                                 |
| 40 | Marleen Vallinga          | QoC  | Long-term satisfaction after genital gender affirming surgery in transgender women: intestinal versus penile inversion vaginoplasty                                                |

## POSTER PRESENTATIONS

|    |                           |      |                                                                                                                                                                       |
|----|---------------------------|------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 41 | Marlinde van Dijk         | HBCD | Attitudes of healthcare professionals towards discussing lifestyle in routine clinical practice                                                                       |
| 42 | Meike Holdinga            | QoC  | Patients with hearing loss and cognitive impairment: how do hearing-healthcare professionals deal with it?                                                            |
| 43 | Mijs Buter                | DH   | Exploring patients and experts perspectives: guiding artificial intelligence research for endometriosis care                                                          |
| 44 | Minke Geerlings-Holleboom | DH   | MOOVER study: validating the ViQtor wearable for continuous activity monitoring in a simulated hospital setting                                                       |
| 45 | Quinty Willems            | SPH  | Digital tools for the detection of occupational contact dermatitis: a systematic review                                                                               |
| 46 | Ricki de Koning           | MH   | Offspring of parents with a mood disorder: prevalence of mood disorders and other psychiatric diagnoses, and the effect of the severity of the parental mood disorder |
| 47 | Saskia Smits              | QoC  | A multi-stakeholder perspective on genomic sequencing in newborn screening: how to proceed?                                                                           |
| 49 | Siyu Zhou                 | HBCD | Association between maternal characteristics, offspring growth and pubertal timing: results from a longitudinal birth cohort study                                    |
| 50 | Stella Brugman            | HBCD | "Weight loss itself doesn't hurt": lived experiences of the early phase of developing malnutrition among community-dwelling older adults and their Informal carers    |
| 51 | Tessa van Gastel          | HBCD | Dutch translation and psychometric assessment of the PROMIS® sexual function and satisfaction measure version 2.0 in the general population                           |
| 52 | Theogene Uwizeyimana      | MH   | The impact of prenatal interventions for common mental disorders on offspring outcomes: an updated meta-analysis                                                      |
| 53 | Yannick Oldert            | HBCD | Mechanisms driving physical activity behavior in adolescents: a systematic review of mediators                                                                        |
| 54 | Muhannad Smadi            | MH   | Oxidative stress: a potential mediator in the relationship between smoking and psychiatric disorders                                                                  |

# ARTS IN SCIENCE

## LEARN, EXPERIENCE AND CREATE ARTS IN SCIENCE

Join us for an inspiring and creative lunch activity where art and science come together. This interactive session is designed around three main elements:

### LEARN

Discover and learn about the world of arts in science at our information stand stands, and through videos, poems, and books.

Hosted by Anja Lok, psychiatrist at Amsterdam UMC.

### EXPERIENCE

Get inspired by art: Experience and join the 'MeeMaak Atelier', an art experience by artist Nieke Koek where participants translate their pain or bodily sensations into abstract, three-dimensional clay objects. Only a few spots available.

Co-organized by Menno Dudok van Heel, head of art affairs and curator at Amsterdam UMC.

### CREATE

Create art together: unleash your creativity! Contribute to large collaborative artworks with paint on themes such as people and planet.

Come learn, experience, and create: discover how art can enrich science and vice versa.

# PARALLEL THEME SESSIONS

## **(1) CLIMATE CHANGE, GREEN ENVIRONMENT, AND HEALTH**

*Organized by Global Health & Mental Health*

Climate change affects our environment in numerous ways, through rising temperatures, extreme weather, and environmental degradation. Its impact on human health is profound, worsening air and water quality, spreading infectious diseases, and increasing disaster-related trauma. Exposure to climate disasters or displacement can trigger stress, anxiety, depression, and PTSD. Long-term changes such as droughts or rising seas may lead to chronic grief and loss, especially in land-connected communities. Even those not directly affected can experience climate anxiety, particularly younger generations concerned about the planet's future. Mental health is a vital part of climate resilience. Green environments offer protective benefits, reducing stress, improving mood, fostering recovery and strengthening community cohesion. This session will explore global research on how climate change affects mental health and infectious diseases, highlighting strategies to build resilience through environmental and public health interventions. Presenters in this session are: dr. Jurjen Luykx, Philip Elders and dr. Jolanda Maas.

## **(2) CONTEMPORARY PUBLIC HEALTH CHALLENGES FROM A COMPLEXITY PERSPECTIVE**

*Organized by Health Behaviors & Chronic Diseases*

The grand public health challenges of this century are likely to share systemic drivers. A complexity perspective can help expose how the dimensions health outcomes, social inequalities, planetary health and economic prosperity are emergent properties of the underlying system(s) as a whole. In this workshop, we will use a complexity perspective to view these dimensions together, rather than in silos. Workshop participants will: i) identify the major driving forces affecting health outcomes, socioeconomic inequalities, economic prosperity and planetary health, for unhealthy diets, physical inactivity and smoking; ii) identify the interconnectedness of these drivers; iii) discuss potential research agenda's to tackle the interconnected systemic drivers around diet, physical activity and smoking. After this workshop, participants will understand the interconnectedness between the four dimensions and be inspired to apply these insights to their own future research.

---

### **(3) DIGITAL SUSTAINABILITY: THE HIDDEN IMPACT OF DATA AND METHODS**

*Organized by Digital Health & Methodology*

As digitalization and AI grow in public health, so does their environmental footprint. This session, co-organized by APH Digital Health and APH Methodology, explores how our data practices and methods contribute to carbon emissions—and how we can act more responsibly. Our colleagues from Amsterdam UMC bring diverse perspectives to this challenge. Charlotte Lafage, software engineer, lecturer in Medical Informatics, and member of a Green Team, uses visual comparisons to raise awareness of the CO<sub>2</sub> impact of digital tools. Arnaud Lauteslager, head of Architecture, Security & Policy, shares how sustainability is being embedded into the hospital's IT infrastructure and AI governance. Oscar van der Meer, AI architect with a background in law, life sciences, and computer science, presents practical strategies to optimize research pipelines and reduce digital waste. Together, they highlight the emerging field of Green AI and invite you to reflect on and improve the sustainability of your digital work.

### **(4) COLLEGE TOUR: AGING IN PLACE THROUGH THE EYES OF OLDER PEOPLE WITH LIFE EXPERIENCE (IN DUTCH)**

*Organized by Aging & Later Life*

We organize an exchange between researchers and older persons around the topic 'aging in place'. We invited a panel of older people with diverse life experiences. This also includes the local chair for older persons who provide advice to policymakers. We aim to apply the College Tour format, allowing interaction with the audience. The panel will share their thoughts on several presented dilemmas and in between there is room for the audience to ask questions. We also form a panel of researchers on the topic of aging in place and supportive technologies. Questions we would like to address include: what dilemmas do you experience to continue living in your home as you age? What facilitates you to age in place and what is missing? Is there a type of technology that would be helpful for you to age in place? Our session fits in the overall theme of the annual meeting, as aging in place is a form of sustainable living.

Note: The session will be held in Dutch to make it easier for the panel to express themselves.

---

## **(5) SUSTAINABILITY AS METHOD: EMBEDDING ENVIRONMENTAL AWARENESS, REFLEXIVITY, AND EQUITY IN RESEARCH PRACTICES**

*Organized by Quality of Care*

This interactive session will explore how reflexivity, care, and environmental awareness can reshape research practices. We will discuss the importance of perspective-taking, community engagement, and equity in the green transition, emphasizing how researchers can integrate inclusive and just approaches through study design, methodology, and ethical reflection. We will start by exploring why caring for the environment is an essential part of being a responsible researcher today. Drawing on key quotes from expert interviews, we will introduce a competence framework for sustainability in research and innovation. Participants will then be invited to engage with our participatory micromodules. The session will conclude with sharing experiences of the exercises and how the content might influence the participants' research activities, and we will signpost where and how participants might deepen their engagement with sustainability as method.

## **(6) COLORING CONNECTIONS. RESEARCHING GENDER, INTERSECTIONALITY, AND HEALTH IN THE CLIMATE CRISIS**

*Organized by Personalized Medicine*

To develop equitable responses to the pressing health issues of our time, including the climate and ecological crisis, researchers and health professionals must explore what gender-sensitive and equitable health research looks like. This creative session invites participants to draw, color, and engage in discussions on integrating gender dimensions—alongside other aspects of diversity (intersectionality)—into health research at all levels within the context of the climate crisis. Topics of interest include heat stress, violence, health systems, medical education, and urban planning. Through coloring and drawing exercises, we will clarify concepts and methodologies, and explore questions. Artworks will be exhibited for participants of the conference. This session will be hosted by dr. Petra Verdonk from Dutch Society for Gender & Health (NVG&G).

## **(7) WHAT ABOUT OUR OWN (MENTAL) HEALTH AND WELLBEING? (HOW) DO WE PRACTICE WHAT WE PREACH?**

*Organized by Societal Participation & Health*

A research job can be demanding—especially in today's (academic) climate. In this interactive workshop, we will explore the (mental) wellbeing of (young) researchers. What can we learn from each other? What do we need from one another and from our department? Where can we be more critical? Together, we'll create an open space for reflection, sharing, and inspiration. Let's make a difference - together. This workshop is organized in co-creation with the APH Diversity, Equity & Inclusion (DEI) committee.

# APH SUSTAINABILITY BOOSTER GRANTS

*With a value of maximum €5.000*

APH is offering 6 APH Sustainability Booster Grants with a value of maximum € 5.000 to APH researchers. The booster aims to strengthen sustainable research practices within APH. To compete for this booster grant, you have to submit an eligible booster plan and attend the APH Annual Meeting on November 25. At the end of the Annual Meeting, 6 winners will be selected during the plenary closing ceremony based on random selection.

## See below our Sustainability Booster Grant nominees!

- |     |                    |                                                                                                                                              |
|-----|--------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| 1.  | Alannah Hijlkema   | Tailored communication materials for individuals with genetic disorders and/or intellectual disabilities                                     |
| 2.  | Annelinde Lettink  | From observation to scale: Pilot to create labelled data for inclusive 24-hr movement behaviour monitoring in early childhood                |
| 3.  | Barbara Leitner    | M-Power: Empowering PhD Researchers to build sustainable, positive, and responsible research cultures through workshops                      |
| 4.  | Berber Kapitein    | Small switch, big impact: Transitioning from aerosol to dry powder inhaler in children with asthma with national action plan                 |
| 5.  | Brecht Haakma      | Recovering & re-using forgotten assistive devices by developing a database                                                                   |
| 6.  | Dorinde Korteling  | Sustainable measurement of pediatric mobility and upper extremity by updating and validating PROMIS Mobility and Upper Extremity instruments |
| 7.  | Elmi Zwaan         | Empowering occupational health professionals for sustainable return-to-work practice with visual materials                                   |
| 8.  | Emma Twait         | Building sustainable bridges at the European Public Health conference                                                                        |
| 9.  | Fabienne van Vliet | Sustainable employability of people with Multiple Sclerosis: understanding cognitive endurance across the workday                            |
| 10. | Fenna van Ommen    | Sustainable implementation of the PLACES intervention to strengthen sustainable reintegration practices                                      |
| 11. | Fleur Heuvelman    | Transforming transport for all: Policy solutions for fair and green mobility                                                                 |
| 12. | Franka Roest       | Data visualization and knowledge dissemination of implementation research at the Jeroen Pit Huis                                             |
| 13. | Isa Bijloo         | Menstrual health workshops for youth and adults in Amsterdam                                                                                 |

# SUSTAINABILITY BOOSTER GRANT NOMINEES

- |     |                        |                                                                                                                                                                 |
|-----|------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 14. | Joost Piët             | Research on effectively sharing information on environmentally sustainable prescribing with stakeholders                                                        |
| 15. | Karen Holtmaat         | Retrospective pilot study analyzing greenspaces and cancer survivors' quality of life and wellbeing                                                             |
| 16. | Katrina Messiha        | Sustainable co-creation principles in public health: From theory to practice with a digital tool                                                                |
| 17. | Kirsten Muller         | Advancing resilience in families after preterm birth: Digital and biological insights in parental mental health to improve sustainable participation in society |
| 18. | Maaïke Soors d'Ancona  | Interactive workshops and stakeholder engagement to advance circular medical textile strategies in healthcare                                                   |
| 19. | Maarten Kok            | Follow-up study on expired medicines in public health facilities in Indonesia to improve medicine management and reduce healthcare waste                        |
| 20. | Mara Kirschner         | Active transport for all: Co-creating sustainable solutions with youth facing mobility barriers in Amsterdam through group model building sessions              |
| 21. | Maria Giulia Millesimi | An art-science lab for sustainable research practices at Amsterdam Public Health research institute                                                             |
| 22. | Mariah Knežević        | Co-creation of a digital family app and sustainable observations of parent-child interactions in diverse populations                                            |
| 23. | Maxime van den Heuvel  | Healthy, sustainable & visible: Creating a visual identity for the Amsterdam UMC food transition                                                                |
| 24. | Sarah van den Berg     | Air pollution information brochures for children with respiratory diseases: air (e)quality for all                                                              |
| 25. | Simone Burger          | Grounded for the climate: Supporting sustainable travel at the Faculty of Behavioural and Movement Sciences (VU) through campaigning                            |
| 26. | Siyu Zhou              | Quiet growth: Investigating environmental noise and pubertal timing using multiple cohort data                                                                  |
| 27. | Trynke Hoekstra        | Building better virtual teams: Practical recommendations for sustainable public health collaborations                                                           |
| 28. | Yuwei Qi               | Visualizing wellbeing: Reusing existing cohort data on depressive symptoms to support prevention in public health                                               |
