

# All seminar series

## *Kick off of the new All seminar series: Cancer Immunology*

Please join us online on the **7th of September, 2021** 16.00-17.00 hrs

### **Jeffrey Rathmell - Fueling T Cells: Immunometabolic Checkpoints in Cancer and Inflammation**

Jeffrey Rathmell will kick off the new All seminar series with the Cancer Immunology seminar on September 7 at 16 hrs, online. He received his PhD at Stanford University, followed by postdoctoral work at Universities of Chicago and Pennsylvania.

Jeffrey Rathmell can be considered a pioneer in the field of T cell immunometabolism. From around the year 2000 he has worked on the role of CD28 and cytokines in regulating glucose metabolism in T cells. Currently at Vanderbilt University in Nashville, his group studies both immunologic and cancer metabolism, aiming to identify mechanisms by which cell metabolism modulates inflammatory diseases and anti-tumor immunity as well as growth and proliferation of cancer cells.
